New & Improved Acid Stain

The new & improved **ETCH STAIN** line from versatile building products has been specially formulated by our team of chemists to provide you with the highest quality in concrete acid stains. Improvements have been made in color selection, depth and wetting of surface.

More Than Just Paint

When applied to a finished concrete floor, **ETCH STAIN** reacts with the concrete providing a permanent color, giving it an old world look.

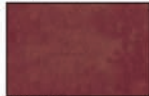

Aqua Blue

Black

Cota

English Red

Green Lawn

Malay Tan

Vintage Umber

Golden Wheat

The Finishing Touch

VBP offers a complete line of Clear Sealers to protect your concrete floor surfaces. Our lab utilizes the latest technology in low VOC and Non Flammable Sealers while still obtaining a material that can be applied with relative ease. Here is an example of the 2 latest additions to our clear sealer line; **Poly Urea 5000** is an amazing new technology in the Urethane arena that is 100 percent solids and allows film thickness to build in excess of standard systems with water clarity and mirror smoothness. **Versa-Thane 5400** is a Waterborne Chemical Resistant Urethane that is unequalled in the coatings industry! The film build, gloss and chemical resistance are comparable to solvent based systems, yet without the intense odor associated with them or the high V.O.C. levels.
